

North Devon Biosphere Partnership

Position statement on sustainable energy (extracted from the Partnership's position statement on the Atlantic Array proposals in the Bristol Channel as agreed at the meeting of 22/01/2010 and revised in September 2011)

The North Devon Biosphere partnership:

- Strongly supports the need to mitigate climate change through energy demand reduction, energy efficiency and production of renewable energy to reduce our use of fossil fuels with the Biosphere Reserve
- Believes that measures to achieve this must be consistent with good technical and economic principles and must not disproportionately compromise other Biosphere Reserve, or statutory designation objectives.
